

The Team Behind NUR

Our auditing team has over 30 years of combined experience performing audits. They have performed audits in 48 states, as well as in Mexico and Canada, and within virtually every type of industry. At NUR all audits are performed by an experienced auditing team- we do not use software programs to target the low hanging fruit in order to cut costs and hedge risk. Our audits are quality driven in order to provide maximum refunds and reduce future costs.

Don't Risk Losing Your Firm's Refund Money!

On average, there is a 36 month limitation on reporting billing errors and discrepancies. Anything beyond the limitation, will be lost forever! Not only will we obtain refunds on erroneous charges and billing discrepancies, but we will remove unnecessary charges to directly add to your bottom-line!

How to start?

All we need is a copy of your utility/telecom invoices and any associated contracts. NUR is compensated only if a client receives a refund or through future credits. There are no consulting fees or hidden charges. There is absolutely no risk on your behalf. We will present our findings to you for approval before errors are removed or changes will be made.

“We offer you the peace of mind to know that your Utility and Telecom invoices are correct and cost efficient”

Electric, Water & Sewer, Natural Gas, Long Distance, Local, Wireless, Data

What We Do

NUR removes erroneous charges and billing discrepancies charged on the telecom/utility invoices. We have the suppliers provide you with a refund on overcharges and errors, and create true and uncontested monthly reductions in your utility expenses. Types of common errors found are:

- Incorrect tax classifications
- Double meter reads
- Demand Errors
- Telephone cramming charges
- Charges on unused/old lines
- Excessive surcharges

80% of utility invoices contain Errors and Overcharges!

Why Do You Need an Audit?

Many of today's companies fail to realize the importance of auditing utility and telecommunication budgets and the accompanying monthly charges. Too often spending in this category is not verified due to an assumption of accuracy and cost efficiency. We often hear "as long as it looks right, we pay them." The utility company's position is that it is your responsibility to verify your bills. By assuming your bills are correct or there is nothing you can do leaves your company vulnerable to errors and overcharges. An audit may be the best thing you can do now, with the potential of refunds and savings going straight to your bottom line.

You've Switched Energy

Switching your generation supplier to a 3rd party supplier is the easiest and most convenient way to lower the cost of what you pay for energy.

You've Decreased Your Consumption

Products such as retrofitting lights, energy capacitors, consumption monitors, and etc. will help your company decrease how much energy they use and how much you demand.

NOW- Refund and Remove Unnecessary and Erroneous Charges

An audit will rectify and refund any information lost during the transferring of your energy suppliers as well as telecommunication providers. You will be assured that your utility invoices are 100% efficient and accurate.

What are the Risks?

There is no risk to perform an audit! We are purely contingent base only out of the refunds/future credits we obtain for our clients. If we do not find anything, we simply walk away with nothing. You will have the satisfaction of knowing your invoices are 100% accurate, for **FREE!**

“We’re Committed to Refunding Our Clients Years of Overpaid Telecom & Utility Billing Charges and Errors at No Out-of-Pocket Cost”
