

Can I save money by choosing a competitive electric supplier?

Depending on where you live, you may be able to **save money by switching electric suppliers. Since rate caps have expired, the number of competitive electric suppliers offering services to residential and small business customers has increased in most service territories.**

Also, an electric supplier may be willing to negotiate on price or other services to entice you into switching suppliers. Competitive offers may not be available in all areas.

Why should I shop for electricity?

Just like you shop for any household item, you can shop for your electricity to find the best deal and the best service for your needs. Remember, saving just one cent per kWh could translate into more than \$100 a year in savings, depending on usage. Competitive offers may not be available in all areas.

What is an electric supplier?

Your electric supplier is the company that provides your electric generation service. In Pennsylvania, you have the power to choose your electric supplier.

If I choose a new electric supplier, what part of my service will change?

There are three parts to your electric service: generation, transmission and distribution. Generation is the production of electricity. Transmission is the movement of that electricity from where it is produced to a local distribution system. Distribution is the delivery of electricity to your home or business.

When you shop for an electric supplier, you are choosing the company that generates your electricity. For most electric customers who select a new supplier, transmission costs will also be included in the charges from your new supplier. **The electric utility that distributes your electricity will remain the same.**
